#### WARRANTY AND LIABILITY DISCLAIMER

Notwithstanding any additional, different or conflicting terms or conditions contained in the purchaser's ordering document or other document, to the maximum extent permitted by applicable law, Memec, LLC and its subsidiaries ("Insight" and "Impact") expressly disclaim all warranties, conditions, or representations, express, implied, statutory or otherwise, regarding this product or any other services provided by Memec in connection with this product, all of which are provided "as is", and this disclaimer shall apply to any implied warranties or conditions of merchantability, satisfactory or merchantable quality and fitness for a particular purpose, or those arising from a course of dealing or usage of trade.

Under no circumstances (to the maximum extent permitted by applicable law), shall Memec be liable to the purchaser or to any third party, for a claim of any kind arising as a result of, or related to the product, whether in contract, in tort (including negligence or strict liability), under any warranty, or otherwise. This limitation of liability shall apply notwithstanding the fact that a claim brought by the purchaser or any third party is for indirect, special or consequential damages (including lost profits), even if Memec has been advised of the possibility of such damages, or for warranties granted by the purchaser to any third party.

The purchaser acknowledges and agrees that the price for this product is based in part upon these limitations, and further agrees that these limitations shall apply notwithstanding any failure of essential purpose of any limited remedy.

## 1 Overview

The P160 Prototype Module provides a useful expansion, probe, and prototype feature in a small, low cost daughter card form-factor, compatible with any main system board containing the P160 expansion interface. The Spartan-II, Spartan-IIE, and Virtex-II system boards from Memec all include the P160 interface and can support the P160 Communications Module. Proper user configuration of the main system board is required to enable the P160 interface and the corresponding expansion module test points. This user guide helps provide the necessary details to develop such a configuration. Complete board schematics are provided in Appendix A for your reference.

## 2 P160 Prototype Module

The Insight MicroBlaze Development kit includes a P160 Prototype module, which connects to the main system development board via the I/O module connectors. This board can be used to prototype various user I/O interfaces. A high-level block diagram of this module is given below followed by tables that show the connector pin assignments.

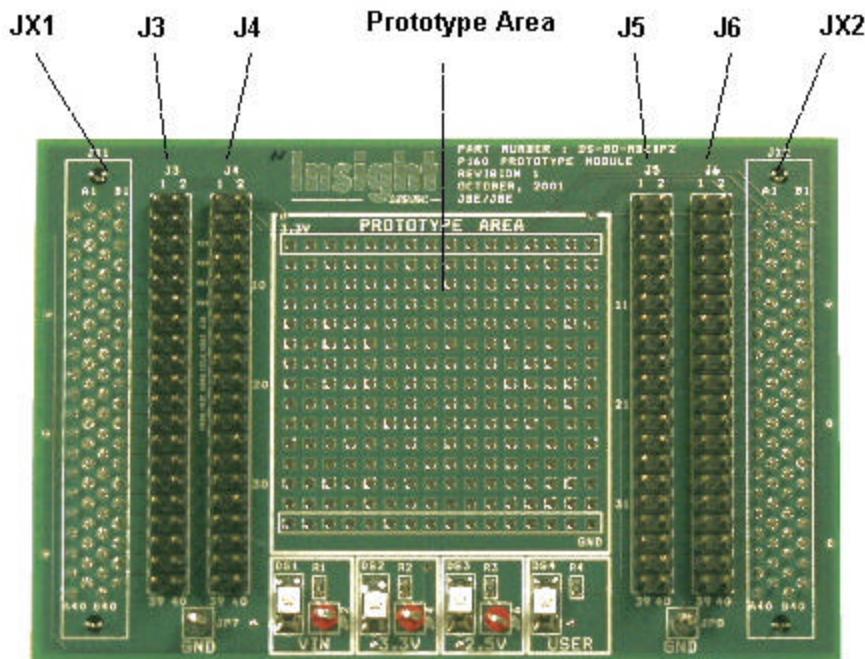

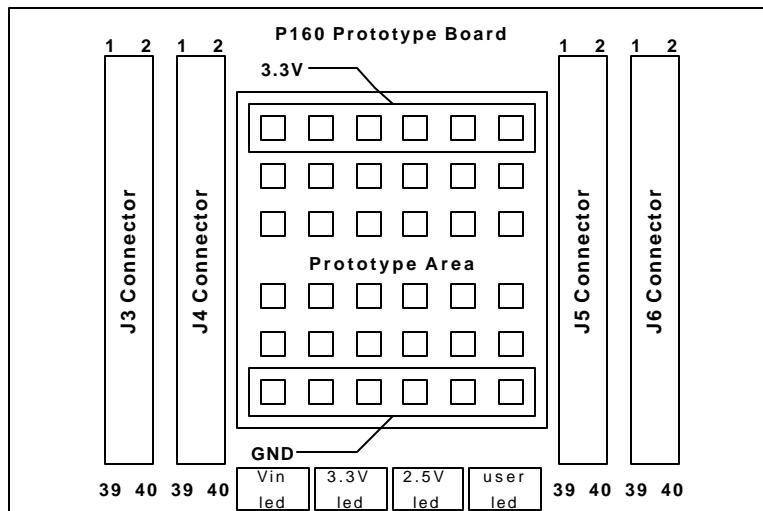

Figure 1 – P160 Prototype Module Board

**Figure 2 – P160 Prototype Module Block Diagram**

### 3 User Headers

The P160 Prototype module provides four 2 x 20 headers for connection to the P160 Expansion signals. These signals are driven from the main system board and are defined by the FPGA design implemented. Tables 1 through 4 define the connections between the headers and the P160 connectors. Corresponding connections between the P160 connectors and the system board FPGA can be found in the related system board User Guide.

**Table 1 – J3 Pin Assignments**

FPGA Pin #	J3 Pin #	FPGA Pin #
Vin	1	2
2.5V	3	4
RIOA1	5	6
RIOA2	7	8
LIOB9	9	10
LIOB11	11	12
LIOB13	13	14
LIOB15	15	16
LIOB17	17	18
LIOB19	19	20
LIOB21	21	22
LIOB23	23	24
LIOB25	25	26
LIOB27	27	28
LIOB29	29	30
LIOB31	31	32
LIOB33	33	34
LIOB35	35	36
LIOB37	37	38
LIOB39	39	40

**Table 2 – J4 Pin Assignments**

FPGA Pin #	J4 Pin #		FPGA Pin #
Vin	1	2	3.3V
2.5V	3	4	RIOB2
TCK	5	6	LIOA9
